SCIENCE OBJECTIVITY AND CONSCIOUSNESS

“This long-awaited and seminal book arguing for a self-reflective and interdisciplinary science of consciousness goes back to the epistemological roots of Western philosophy and culture to articulate a new and subtle relationship between science and philosophy . . . Readers will be richly rewarded by a careful reading of this philosophical and scientific tour de force—it is sure to count among the most defining and significant books of the decade.”

— DAVID LORIMER,

Program Director, Scientific and Medical Network
